

Y6 Extra Challenge Answers Tuesday 9th June.

Amir says,

My triangle has two 90° angles.

Can Amir be correct? Can you demonstrate this?

Amir can't be correct because these two angles would add up to 180 degrees, and the third angle can't be 0 degrees.

Eva says,

My triangle is a scalene triangle. One angle is obtuse. One of the angles measures 56° . The obtuse angle is three times the smallest angle.

Work out the size of each of the angles in the triangle.

The interior angles of Eva's triangle are 56° , 93° and 31° .

Calculate the size of the reflex angle b.

234°

Alex

My angles are 70° , 70° and 40° .

Alex is describing an isosceles triangle.

My angles are 45° , 45° and 90° .

Mo is describing an isosceles right-angled triangle.

Eva

My angles are 60° , 60° and 60° .

Eva is describing an equilateral triangle.

What type of triangle is each person describing? Explain how you know.

I have an isosceles triangle. One angle measures 42 degrees.

What could the other angles measure?

The angles could be:
 42° , 42° , 96°
 or
 42° , 69° , 69°

Calculate the size of angles a, b and c.

Give reasons for all of your answers.

a is 58 degrees because vertically opposite angles are equal.

c is 57 degrees because angles on a straight line add up to 180 degrees.

b is 65 degrees because angles in a triangle add up to 180 degrees.
