

## Problem solving - Converting Units

Remember that approximately:

2lb (pounds) = 1kg

1lb = 0.5kg

1) You get approximately 4 apples **or** 4 bananas in one pound (1lb)

So roughly how much would **6 bananas and 4 apples** weigh altogether in kilos?

*Hint - work out how much 2 bananas would weigh...*

- *Work out weight in lb*
- *Convert into kg*

2) You get approximately 6 mangoes in 1kg.

So roughly how much would **30 mangoes** weigh in lb?

3) You get approximately 6 oranges in 1lb.

Roughly how much would **27 oranges** weigh in kg?
