

Write an Animal Report

Megan Coyle. *Mr. Whiskers the Blue Seal*. 2009.

Length: 1 – 2 pages

Go to the library or use the Internet to research the animal you made a collage of. You will write a report that covers the following:

- The scientific name and how many species there are of that animal
- The countries and habitats they live in (in the wild)
- Physical characteristics and how these characteristics help them survive in their habitat
- Biology and behavior – this can include the way they communicate with one another, their diet, social behavior, etc. Include common perceptions of how people think the animal behaves and how these perceptions compare to the way the animal actually behaves in the wild.
- Predators and threats

Your report will follow the life cycle of the animal while including the additional information mentioned above.
