

08.02.21 – Deepening Challenge

Ron makes $\frac{3}{4}$ and $\frac{3}{8}$ out of cubes.

He thinks that $\frac{3}{8}$ is equal to $\frac{3}{4}$

Do you agree?

Explain your answer.

Possible answer:

I disagree with Ron because the two wholes are not equal. He could have compared using numerators or converted $\frac{3}{4}$ to $\frac{6}{8}$. If he does this he will see that $\frac{3}{4}$ is greater. Children may use bar models or cubes to show this.
